

Implementing LEAN Strategies and the Eight Steps of Evidence-Based Design to Increase Caregiver Efficiency

Learning Objectives:

1. Obtain an understanding of how one firm integrated LEAN strategies and EBD to increase caregiver efficiencies.
2. Explore the process of translating research hypotheses into measurable results to produce evidence-based design solutions.
3. Gain insights into the process of conducting and measuring post-occupancy evaluation results.
4. Explore challenges in the implementation of the evidence-based design process and how they were overcome.
